header 2

header 3

paragraph

paragraph 1

paragraph 2

list

A list:

- ul 1
- ul 2

Must have blank line after last paragraph: - this is not an item - neither is this

example list

(1)

$$(1) \ e = mc^2$$

You should know that (1) is false!

code block

Inline: `this is inline code`

Block:

```
this is a block
it can contain many lines
```

Must have blank line after last paragraph: this is not a block because it does not have a blank line before last paragraph

Delimited code block with tildes:

```
import os

def f(a):
    print a

f("abc")
```

with backticks:

```
import os

def f(a):
    print a

f("abc")
```

I prefer backticks for analogy with inline blocks.

Give attributes:

```
100 import os
101
102 def f(a):
103     print a
104
105 f("abc")
```

math

Inline: x^2
